

Nucleaner

【Brush and Flush】

The Nucleaner cleans deeper, in less time and it prolongs the life of the filter cartridge by leaving the treated filter cartridge restored to its previous condition.

DIRECTIONS

- Attach to any standard garden hose
- Using the brushes to remove the dirt
- Turn on water and press on the trigger
- Spray the water and cleaner mix into the filter
- Add the cleaning fluid in the filter cleaning tank if you want

Nucleaner is come out with new Filter Cleaning Tank to further improve your cartridge cleaning experience. Simply add your favorite cleaning fluid.

The Darlyly Nucleaner Filter is a ground-breaking pool and spa filter cartridge cleaning device which has been ergonomically designed by Darlyly.

Precision engineered and built to last using the highest quality materials

together with top quality bristles this trigger controlled unit will reduce filter cleaning

time and ensure a much cleaner filter, removing more dirt, debris and grease than traditional cleaning devices. The bristles of the brushed have been designed to be tough yet gentle on the filter media.

This is a new design that uses brushes combined with high-power water jets which ensures the “brush and flush” action not only makes for effortless yet effective filter cleaning, deep into the cartridge pleats, but also is better for the environment because less water is used.

The Nucleaner Filter Cleaner is perfectly balanced making it easy to use. Once the cleaning liquid has been used up leave the filter to stand for at least 1-2 hours (10 minutes with instant cartridge cleaner). Then without filter cleaner liquid just use the water spray and brush to remove any remaining dirt.
